

## Red October Bluestem

*Andropogon gerardii 'Red October'*

Height: 6 feet

Spread: 30 inches

Sunlight: ☉

Hardiness Zone: 2

Other Names: Big Bluestem, Turkey Foot

### Description:

This extraordinary selection of native prairie grass will reach five to six feet tall with dark green foliage that develops purplish-red highlights by late summer, then turns a vivid scarlet red in fall; plant in full sun for best color

### Ornamental Features

Red October Bluestem is primarily grown for its highly ornamental fruit. The coppery-bronze seed heads are carried on showy plumes displayed in abundance from late summer to early fall. Its attractive grassy leaves are dark green in color with showy purple variegation and tinges of red. As an added bonus, the foliage turns a gorgeous scarlet in the fall. The red stems can be quite attractive.

### Landscape Attributes

Red October Bluestem is an herbaceous perennial grass with an upright spreading habit of growth. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cut back to the ground in late winter before active growth resumes. It has no significant negative characteristics.

Red October Bluestem is recommended for the following landscape applications;

- Vertical Accent
- Mass Planting
- General Garden Use

## Planting & Growing

Red October Bluestem will grow to be about 5 feet tall at maturity, with a spread of 30 inches. It tends to be leggy, with a typical clearance of 1 foot from the ground, and should be underplanted with lower-growing perennials. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an herbaceous perennial, this plant will usually die back to the crown each winter, and will regrow from the base each spring. Be careful not to disturb the crown in late winter when it may not be readily seen!

This plant should only be grown in full sunlight. It is an amazingly adaptable plant, tolerating both dry conditions and even some standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This is a selection of a native North American species. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.
