JOLLY LANE GREENHOUSE

PassionFruit Lantana

Lantana 'Ballanpaf'

Plant Height: 12 inches

Flower Height: 16 inches

Spread: 14 inches

Spacing: 14 inches

Sunlight: ○ ◐

Hardiness Zone: (annual)

Description:

A beautiful selection providing an abundance of multi-colored flowers, over deep green foliage; a great choice for sunny hanging baskets; heat and drought tolerant; low maintenance; attracts pollinators

Ornamental Features

PassionFruit Lantana features showy cymes of pink flowers with orange overtones and yellow centers at the ends of the branches from early summer to mid fall. Its tomentose pointy leaves remain green in color throughout the year.

Landscape Attributes

PassionFruit Lantana is a multi-stemmed annual with a ground-hugging habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This is a relatively low maintenance plant, and should not require much pruning, except when necessary, such as to remove dieback. It is a good choice for attracting butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

PassionFruit Lantana is recommended for the following landscape applications;

Planting & Growing

PassionFruit Lantana will grow to be about 12 inches tall at maturity extending to 16 inches tall with the flowers, with a spread of 14 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 14 inches apart. Although it's not a true annual, this fast-growing plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for a low-water garden or xeriscape application. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by cuttings; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

PassionFruit Lantana is a fine choice for the garden, but it is also a good selection for planting in outdoor containers and hanging baskets. Because of its spreading habit of growth, it is ideally suited for use as a 'spiller' in the 'spiller-thriller-filler' container combination; plant it near the edges where it can spill gracefully over the pot. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
